

O&O Syspectr – Management Console

Manage and monitor your network. Anytime. Anywhere.

O&O Syspectr monitors PCs and servers, and notifies users of potential risks before they become a big problem and wreak havoc: Are all Windows security precautions in place on every PC and server, have all security related Windows Updates been installed, or was any new software detected that really shouldn't be there?

All the information can be accessed via any modern browser

anytime, anywhere. In addition, the user can resolve potential risks immediately via a remote desktop connection.

Even if the PC is not switched on, all system information can be retrieved. This means a diagnosis can be provided even if the computer no longer works. O&O Syspectr can also provide immediate email notifications about specific events, allowing the user to take action without any delay.

Installed and operational in under five minutes

O&O Syspectr is incredibly easy to use. Once an account has been created on www.syspectr.com, any number of PCs and servers can be monitored. All that's needed is the one-time installation of the client application on the machine. Then, all the settings can be configured and events monitored via the web interface.

These products can be managed centrally

Avira Antivirus Pro – Business Edition

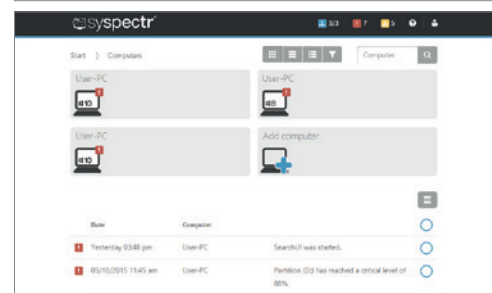

Avira Antivirus Server

Avira Antivirus for Endpoint

Avira Antivirus for Small Business

The O&O Software management console is free to use for new customers and those renewing existing licenses.

O&O Syspectr – Management Console

System requirements

A modern browser and internet connection are all that are needed to use the admin console. We recommend enabling two-step verification, which O&O Syspectr offers in compliance with RFC 6238.

Desktop-PCs

Windows 7, 8.1, 10 (all editions)

Server systems

Windows Server 2012/2012R2, 2016 (all editions)

In addition, O&O Syspectr only requires the .NET Framework. Ports do not need to be enabled in the firewall, and use on virtual machines is also supported.

About O&O Software

Cloud managed IT

Ever since O&O was established in Berlin in 1997 it has enjoyed global success in the area of Windows tools.

„O&O Syspectr marks the next step in the logical evolution of both our desktop and network products“, said Olaf Kehrer, co-founder and Managing Director of O&O Software GmbH. „With our experience in this field, we consider ourselves to be a clear technology leader and will continue to develop and expand O&O Syspectr. And with an unbeatable price, small and midsize companies can enjoy cloud managed IT at no extra cost.“ O&O Syspectr is, like all other O&O products, developed entirely by O&O Software in Berlin and is made accessible via German data centers where security regulations are second to none.

Your benefits at a glance

- Cloud managed German IT
- Proactive warning of potential risks and vulnerabilities
- Reduction in downtime and support effort
- Location-independent support of any Windows system globally
- No costly infrastructure required
- No firewall configuration needed
- Up and running in just five minutes, with on-demand roll out
- Encrypted communication (SSL)
- Two-step verification (RFC 6238)
- German-engineered software developed in and supported from Berlin
- Support provided in English directly by the developer
